

FOREWORD

Pineapple is simple and lightweight framework which will help you to create your own projects easier or if you project is going to be very big it will be a good pattern for building.

It's only first version of this project and it hasn't many components yet, so don't judge me strictly :)but I hope it will be helpful especially for beginners. Who is planning to learn HTML and CSS and who wants to learn how it works.Documentation will help you to deal with that:)

CONTENT TABLE:

- 1) Border
- 2) Logo

- 3) Social-icons
- 4) Banner
- 5) Content without sidebar
- 6) Content2 which contains sidebar
- 7) Photo-block
- 8) Tables
- 9) Cell items
- 10) Footer

You need to begin with opening your editor and opening index.html.

1) BORDER

To create a border you need to write in your editor code which is below I hope you have emmet in your editor.

```
.container>.flex-box>.border100
```

And you will get such thing!

You can see a border which has width on full screen. In default border color is dodgerblue but you can choose whatever you want.

First is container, second class contains flex properties, third contains properties of an element. Flex properties has each element it will help you to have mobile friendly design.

I just showed you this example for understanding concepts of pineapple:

- 1) Very easy to remember how to write name of a class.
- 2) Each element has flex properties it will help to have mobile friendly design as I said above.
- 3) Properties in css have an alphabet order it will help you find something quickly.
- 4) Very simple navigation.

Ok, I have said very much about it 😎

Time to do something. Indeed you can create a border with logo and social icons very fast. You just need to copy that.

```
<div class="container">
  <div class="flex-border">
    <div class="border100">

      <!-- logo -->
```

```

        <div class="flex-img">
            <div class="logo-image">
                
            </div>
        </div>

        <!-- social-icons -->
        <div class="flex-social">
            <div class="social-icons">

                <a class="btn btn-
social-icon btn-lg fa-2x btn-facebook">
                    <span class="fa fa-
facebook"></span>
                </a>
                <a class="btn btn-
social-icon btn-lg fa-2x btn-vk">
                    <span class="fa fa-
vk"></span>
                </a>
                <a class="btn btn-
social-icon btn-lg fa-2x btn-odnoklassniki">
                    <span class="fa fa-
odnoklassniki"></span>
                </a>
                <a class="btn btn-
social-icon btn-lg fa-2x btn-google">
                    <span class="fa fa-
google"></span>
                </a>
                <a class="btn btn-
social-icon btn-lg fa-2x btn-twitter">
                    <span class="fa fa-
twitter"></span>
                </a>
                <a class="btn btn-
social-icon btn-lg fa-2x btn-youtube">

```

```

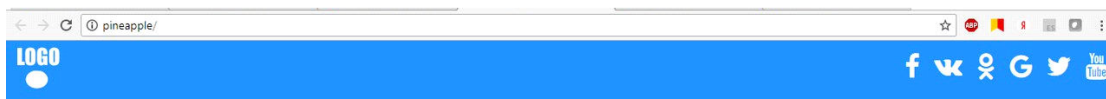

<span class="fa fa-
youtube"></span>
</a>
</div>
</div>
</div>
</div>
</div>
</div>

```

Excuse me it's not looks beautiful there but you don't worry about that too much. Just copy it and align it in your editor. For example in Visual Studio Code you got to click Ctrl+A Ctrl+K Ctrl+F and your code will be aligned.

Don't pay attention to this logo it's just for an example 🤪. You can add any of social icons and change their size after fa-2x (change it on 1x if you want to have it smaller or on 3x if you want to have it bigger).

You must see that

MENU

I forgot to mention it in the table content but you don't have to do so much, just past this code in your editor.

```
<div class="flex-menu">
  <div class="menu-shell">
    <nav>
      <ul>
        <a href="#">Home</a>

        <a href="#">Contact</a>

        <a href="#">About</a>

        <a href="#">Gallery</a>

        <a href="#">Home</a>

        <a href="#">Contact</a>

        <a href="#">About</a>

        <a href="#">Gallery</a>
      </ul>
      <a href="#" id="pull">
        
      </a>
    </nav>
  </div>
</div>
```

4) BANNER

Just write it

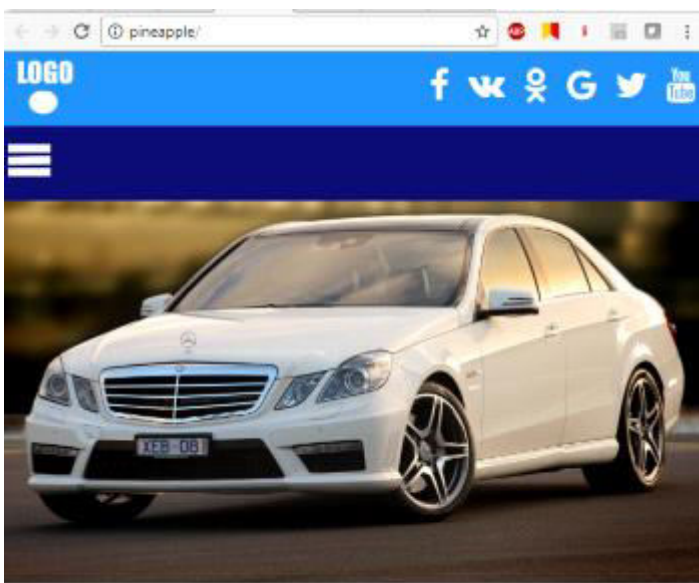

.banner

and change an image in image folder.

But now you will see Mercedes W212.

Now it looks better with menu

mobile view

desktop view

5) CONTENT WITHOUT SIDEBAR

Write it

```
.container>.flex-  
content>.content>.center{*loream ipsum}
```

or just copy that

```
<div class="container">  
  <div class="flex-content">  
    <div class="content">  
      <div class="center">  
  
        <p>Lorem Ipsum is simply  
dummy text of the printing and typesetting  
industry. Lorem Ipsum has been the industry's  
standard dummy text  
ever since the 1500s, when an unknown printer  
took a galley of type and scrambled  
it to make a type  
specimen book. It has survived not only five  
centuries,</p>  
  
        <p>Lorem ipsum dolor sit  
amet, consectetur adipiscing elit.  
Repellendus, ratione at. Asperiores facilis  
libero ab amet  
cupiditate, dolore, eum numquam facere  
blanditiis corporis in qui, accusamus  
exercitationem  
eveniet assumenda  
tenetur.</p>  
  
      </div>  
    </div>  
  </div>  
</div>
```

and put your paragraphs.Center is a class which aligns paragraphs.

6) CONTENT2 WITH SIDEBAR

Would be easier to copy that. After you can change that you need.

```
<div class="container">
  <div class="content-container2">

    <div class="content2">

  </ul>
</div>
</div>
</div>
```

And you will get this result.

Now I think you understood how it works and I can show you the code without explanation.

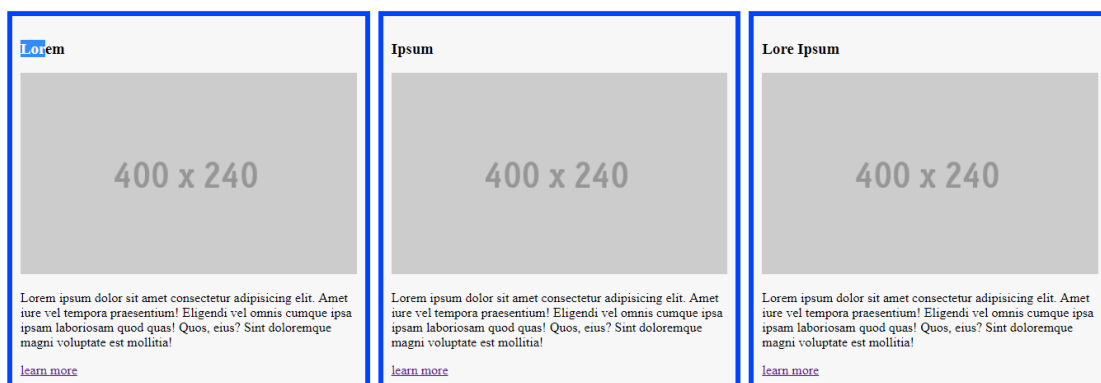

7) Photo-block

```
<div class="container">
